

DUST ACE

Natural dust suppressant and binder

DUST ACE modified tree lignin is safe, effective, and simple to use - ideal for a wide variety of locations such as

- ◆ Car parks, driveways, road shoulders
- ◆ Haul roads, agricultural and forestry roads
- ◆ Public gardens and showgrounds
- ◆ Runways
- ◆ Construction, mining
- ◆ Quarrying, horticultural, waste management applications
- ◆ Dust-intensive manufacturing
Fugitive dust control (foamed version)

DUST ACE coats individual particles with a thin adhesive film that binds and packs them together for a stronger, water resistant surface. Consequently, as well as “laying” dust, water uptake by the road bed surface is greatly reduced.

DOSAGE: 10% solution in water.

TO MIX Dispense required amount of concentrate then top up with water as required, and mix thoroughly.

USE ON ROADWAYS

Apply to compacted, graded surface at normal sprinkler rate. For example, for haul roads apply the solution at 1 litre per square metre every few days, decreasing frequency as product takes effect.

DUST ACE is an exceptionally safe material in use. It is non-toxic and non-hazardous to people, animals, and plants.

DUST ACE FOAM version can generate a continuous blanket to trap airborne particles.

DELIVERY OPTIONS include 25 litre keg, 200 litre drum, 1000 litre IBC (pallet tank), tanker bulk concentrate, tanker bulk diluted ready to spray.

ENVIRONMENT Dust ace is a naturally derived product with minimal environmental impact - very safe in use. Please, refer to the Material Safety Data Sheet (MSDS).

AVAILABILITY: Ex stock UK for delivery worldwide.
